HISTORY

- * LNS INVEST EOOD is a Bulgarian company created by Mrs. L. Brezalieva.
 - She is a long-time professional in the trade of equipment and supplies.
 - She has started its business activity in **1991**.
- * The company is positioned in Plovdiv, Bulgaria and has been operating successfully both in the domestic and foreign markets since 2008.
- * Since its inception, our team has grown and been successful.
- * Throughout the history of the company, we strive to provide our customers with safe, effective, innovative and reliable solutions to their needs.

OUR ACTIVITIES.

- * Design, construction, modernization.
- * Equipment, machinery, spare parts and consumables for:
 - Mills.
 - Feed mills.
 - Grain mills.
 - Grain (silo) based.
 - Bread factories
 - Food industry.
 - Plant for production of vegetable and essential oils and other food processing companies.
 - Light and heavy industries - filter fabrics, filters and more.

THE FUTURE OF GRAIN COOLER TECHNOLOGY REFRIGERATION AND MOISTURIZING OR DRYING SYSTEMS. FOR CEREALS AND SEEDS

Perchè scegliere i refrigeratori Marcold Group

Why choose Marcold Group refrigerator

Un efficace e moderno impianto di refrigerazione costruita la miglior risposta a problemi come crescita di prodotto per ammuffimento, proliferazione di funghi e insetti, fermentazione, accessibilità e risparmio economico.

I nostri sistemi refrigeranti agiscono, oltre che per robustezza costruttiva e versatilità d'uso, per l'installazione in spazi della tecnologia più avanzata che rende agevole agli operatori il controllo del processo e la gestione.

Lo sforzo tecnologico e la passione nel lavoro hanno fatto di MARCOLD GROUP un azienda leader nel settore della refrigerazione con realizzazioni di impianti senza uguali nel mondo.

An effective and modern refrigeration system is the best answer to problems such as product loss due to drying, fungus and insect proliferation, fermentation, accessibility and cost savings.

Our refrigeration systems stand out not only for their structural strength and versatility of use, but also for the intelligent use of the most advanced technology that makes it easy for operators to control processes and manage them.

The technological effort and the passion for work have made MARCOLD GROUP a leading company in the refrigeration sector with unrivalled expertise in the world.

Video on cooling process

Efficienza, risparmio, sostenibilità:
con i nostri sistemi tutto viene controllato da un software proprietario che supervisiona all'attività dei refrigeratori per mezzo di PC and touch screen. The control probes inform the computer about the product to be refrigerated.

- temperatura e umidità ambiente
- aria trattata e inviata nel silo;
- temperatura del gas di ritorno al compressore
- azione and compression pressures
- phisicofici di aspirazione e compressione
- portata d'aria immessa nel silo/capannone.

Tutto sotto controllo:
I dati vengono memorizzati ed elaborati in tempo reale. In modo completamente automatico, stabilendo la modalità di funzionamento dell'impianto stesso. Il nostro programma di gestione è in grado di valutare il modo più conveniente per la specifica esigenza di raffreddamento.

Energy saving:
Il software permette di ottimizzare i consumi elettrici in riferimento alla temperatura iniziale del prodotto da conservare, alla temperatura di fine raffreddamento e alle condizioni climatiche esterne.

Procedimento completamente automatico: il controllo di raffreddamento il prodotto progressivamente grazie all'aria che diventa gradualmente più fresca man mano che cala la temperatura della massa da raffreddare. Viene inoltre fornita la possibilità di **teleassistenza**.

Efficiency, savings, sustainable ability:
with our systems everything is controlled by a proprietary software that supervises the activity of the chillers by means of PC and touch screen. The control probes inform the computer about the product to be refrigerated.

- ambient temperature and humidity
- air treated and sent to the silo;
- return gas temperature to the compressor
- action and compression pressures
- air flow in the silo / shed.

Everything under control:
the data is stored and processed in real time, completely automatically, establishing the operating mode of the system itself. Our management program is able to evaluate the most convenient way for specific cooling needs.

Energy saving:
the software optimizes electricity consumption with reference to the initial temperature of the product to be stored, the end cooling temperature and external climatic conditions.

Fully automatic operation: this allows the product to cool progressively thanks to the air that gradually becomes cooler as the temperature of the mass to be cooled decreases. The possibility of remote assistance is also provided.

SOME OF OUR REGULAR CUSTOMERS.

- * „SIMIT AGRO “ - One of the largest manufacturers and exporter of bakery products. With own bakeries, mills, grain bases.
- * „BELLA BULGARIA “
 - With own mill, grain base, food factories.
- * „Petromel 1” Ltd.
 - Mill with fully computerized flour production by BUHLER.
- * „Oliva AD ”
 - Vegetable oil production company.
- * “Agro MM” Grain production, storage and trade
- * „GrainStore Bulgaria“ Grain storage and international trade.
- * And many more satisfied and regular customers.

WHAT DO WE BELIEVE IN?

- * We want and strive to offer:
 - quality • attitude • concern • efficiency.
- * Our clients are our partners and friends.
- * That together we can do more.
